TO: White Bluff Homeowners
FROM: Your Board of Directors
RE: Invasion of Wild Hogs

They're here and moving closer to the golf courses. We have definite evidence that wild hogs are present near the North Lake & South Lake.

While deer corn is only one of several "menu" choices, we are asking for homeowners to **immediately cease feeding deer** until this mounting problem can be addressed. There is no question that deer corn will attract hogs.

At this point we are asking for voluntary compliance. There is an abundance of natural food for the significant deer population we have. We realize that some homeowners like seeing the deer in their yards; however, this problem supersedes individual gratification. It is a community problem, and we must do everything we can to protect our courses from the damage that can certainly happen. Our friends at The Cliffs face a massive problem of hog infestation with significant damage to their golf course.

Let's voluntarily set aside our individual gratification and realize we are all in this together.
