TO: White Bluff Property Owners
FROM: WB Board of Directors
SUBJECT: White Bluff Marina – Low Water Caution

White Bluff Marina Low Water Caution

The lake level is currently down approximately 8 feet from the control level of 533.0. At this level and lower, it is important to be aware that there are underwater obstructions inside the WB marina basin.

First, the marina entrance is a threshold about 2-3 feet above the floor of the marina. The docks in the marina are secured by numerous 4000 lb. rectangular concrete anchors that are about 2 feet tall and sit at the bottom of the marina floor in the navigable areas of the marina. They are attached with steel cables that crisscross from the dock winches under the docks, then out to the anchors

To minimize the chance of striking an anchor or snagging a cable, trim your drive unit UP while in the marina and proceed slowly

Finally, some trailered boats may have difficulty launching or being retrieved.

To monitor the level of the lake, refer to the USACE website at:
